

VN Terrapak – the front roller

For the optimum soil structure

VN Terrapak

VN Terrapak front roller: Functional equipment for improved performance

The proven Terrapak roller breaks up soil clods perfectly and offers excellent reconsolidation characteristics. As a front attachment it complements the cultivator/drill combination.

Technical advantages:

Can be used together with rotary harrow – seeder combinations

Can be supplied with infinitely adjustable front harrow with refining tines, replaceable blade and spring-mounted side plates.

Clod-breaking and reconsolidation for an optimum seedbed

Ensures that seed will germinate quickly and evenly.

For a better seed bed

The construction is modular, which allows the VN Terrapak to be used behind any VN grubber or as a front packer roller with a working width of 3 m. Mounted in a steer-

able front headstock with a seating for a quick-release three-point linkage, it helps to break up soil clods and reconsolidate the earth. Subsequent sowing can then take place under optimum germination conditions.

Multi-functional: Soil preparation with the VN Terrapak front roller with simultaneous sowing with the VN MasterDrill A.

VN Terrapak front roller

Working width (cm)	Transport width (cm)	Roller type	Roller diameter (mm)	Weight (kg)
300	300	Terrapak	600	950
400	400	Terrapak	600	1270

The VN Terrapak front roller is equipped with adjustable scrapers that can be used to adjust the level of reconsolidation.

The front harrow blades have adjustable working angles – overload protection as standard.
